

Hastelloy Sintered Mesh

Heanjia – Sintered wire cloth are Hastelloy wire mesh layers that are firmly bonded through diffusion annealing. Considering the stability and filtration needs, the mesh layers are also merged with perforated plates or metal fiber felt. Providing extremely high mechanical stability, the diffusion annealing sustains the filtration features of a fine mesh. Using the versatile fabrication techniques, we manufacture and produce Hastelloy sintered meshes that are also customized following the customer's specification requirements. No order is small for us.

Hastelloy Sintered Mesh Construction Materials

Hastelloy B-2, B-3, C-4, C-22, C-276, C-2000, Hastelloy G-30 and Hastelloy X

Hastelloy Sintered Mesh Applications

- | | |
|----------------------------|--------------------------------|
| 1. Liquid & gas filtration | 5. Nutsche Filters |
| 2. Fluidized beds | 6. Chromatography frits |
| 3. Centrifuges | 7. Sand screening in oil units |
| 4. Hydraulic filters | 8. Polymer filtration |
